Printed December 2021

Every care has been taken in the composition of this catalogue.

Chocolatform accepts no liability for possible errors.

All rights reserved. No part of this publication may be reproduced, stored in an automated database and/or made public in any form or in any way, either electronically, mechanically or in any other way without the prior written permission of Chocolatform.

ChocolatForm is an Italian manufacturing company-distributing worldwide the highest quality professional polycarbonate moulds and equipment for chocolate production. Since 2010-Chocolatform became part of Chocolate World Group-offering the most complete and original collection of chocolate moulds with over 2000 styles.

The core business is the development and production of exclusive moulds for both artisan and industrial production. Our team of designers and engineers are at your disposal to consult on designing-developing and manufacturing any kind of mould for chocolate production.

Ranging from praline-tablet moulds, magnetic hollow figures, egg moulds, spinning moulds, industrial big plate moulds with customisation of your choice of logos.

Chocolatform e' un azienda italiana che opera nel settore della progettazione e produzione di stampi professionali in policarbonato e attrezzatura per la lavorazione del cioccolato.

Dal 2010 fa parte del gruppo Chocolate World e distribuisce sia nel mercato Italiano che Internazionale il range di stampi piu' vasto e originale-con oltre 2000 referenze .

La realizzazione e produzione di stampi in policarbonato personalizzati sia ad uso artigianale che industriale e' una delle attività principali di Chocolatform. Stampi per praline e tavolette-personalizzazioni con loghi-stampi corpi concavi con magneti-stampi uova-stampi per macchine rotanti-stampi per linee industriali: il nostro team di designers e ingegneri e' a disposizione per lo sviluppo e la realizzazione di qualsiasi tipo di stampo per la produzione di cioccolato.

EGGS & SPINNING

KLEMES20

KLEMES30

MORSETTO MAGNETICO

Prodotto in acciaio.

Disponibile in 2 versioni:

Articolo KLEMES20 si utilizza per tutti gli stampi con altezza da 24 a 30 mm.

Articolo KLEMES30 si utilizza per tutti gli stampi con altezza da 30 a 42.5 mm

Il morsetto magnetico e' un sistema di fissaggio che permette di unire due stampi per ottenere figure in cioccolato tridimensionali.

Si puo' applicare a tutti gli stampi doppi e recto-verso 135x275 mm o 175x275 mm o 360x195 mm di Chocolatform e Chocolate World.

Gli stampi con morsetto si utilizzano nella macchina rotativa ma anche manualmente.

MAGNETIC CLAMP

Stainless steel made.

Available in 2 versions:

Reference KLEMES20 can be used with all moulds with a height from 24 to 30 mm.

Reference KLEMES30 can be used with all moulds with a height from 30 to 42,5 mm.

The magnetic clamp is a tool that keeps together two frame moulds in order to produce tridimensional chocolate shapes.

It can be applied to double and recto-verso frame moulds with dimension: 135x275 mm or 175x275 mm or 360x195 mm of Chocolatform and Chocolate World.

The moulds with magnetic clamps are made to be used primarily with spinning machines. However, they can be used manually too.

SPINNING MOULDS

Gli stampi per machine rotative sono stampi policarbonato prodotti a iniezione.

Tutti gli stampi sono chiusi con magneti e vengono forniti completi di sistema di fissaggio per le macchine rotative.

The spinning moulds are made with injected polycarbonate.

Every mould is composed by two sides with magnets and a support in order to be used with a spinning machine.

MOULD MAINTENANCE

Lavaggio degli stampi

Una corretta pulizia degli stampi e' fondamentale per preservarli ma soprattutto per ottenere un prodotto finale ottimale.

Gli stampi in policarbonato possono essere lavati con metodi ordinari: vanno prima risciacquati con acqua calda e poi lavati con detergenti che non rilascino tracce di detersivo, prima di essere risciacquati molto bene prima di procedere all' asciugatura. Si possono lavare a mano o in lavastoviglie. Se una pulitura della parte esterna dello stampo e' vivamente consigliata dopo ogni uso, e' vero anche che il leggero e invisibile strato di burro di cacao che rimane negli alveoli anche dopo l'estrazione del cioccolato, non solo preserva lo stampo ma anche contribuisce ad avere piu' brillantezza ai prodotti finiti. In caso di uso frequente e' raccomandabile pulire lo stampo dagli eccessi di cioccolato e avvolgerli singolarmente con pellicola di plastica.

Washing of the moulds

By taking good care during the cleaning process of your moulds, you can lengthen their lifetime and guarantee a better final product.

Moulds can be washed using ordinary methods, with essentially good results. Polycarbonate moulds have a smooth, compact surface which is perfectly resistant to the regular washing methods. However, if the following rules are not observed, the moulds run a risk of creating cracks under stress and deposits of material on the surface.

This results eventually in a decreased durability or in less visible consequences, such as swelling or deteriorating surface. In the case the moulds are used frequently it is recommended to remove the exceeding chocolate on the sides and wrap singularly with plastic foil.

Step 1: Lavaggio.

Raccomandiamo che il sistema di lavaggio venga regolarmente controllato e pulito in quanto eventuali particelle sfuse di qualsiasi tipo possono, ad alta pressione, danneggiare il polycarbonato.

Se si utilizza una lavastoviglie professionale o ad uso domestico bisogna fare attenzione a non aggiungere troppo detergente. Sono da evitare i detergenti caustici e si raccomanda l'utilizzo di un detergente leggermente acido o alcalino come il nostro Puliform (articolo M1569) e il nostro brillantante (articolo M1570 Brillform). Il cioccolato lascia solo macchie di grasso che sono facilmente rimovibili, quindi per una pulizia ottimale la temperatura dell'acqua dovrebbe rimanere intorno a +/- 60 ° C in ogni momento.

Attenzione che temperature dell'acqua elevate possono provocare un deterioramento idrolitico causando una riduzione della durabilità dello stampo.

Step 2: Risciacquo.

Al termine del processo di lavaggio, gli stampi devono essere risciacquati bene in modo da rimuovere eventuali residui di detergente. Soprattutto nella fase di risciacquo è fondamentale l'utilizzo di acqua demineralizzata sempre intorno alla temperatura di +/- 60 ° C per evitare che rimangano delle macchine negli stampi che durante la fase di asciugatura possono diventare graffi.

Step 3: Asciugatura.

Gli stampi devono quindi essere asciugati idealmente usando un compressore ad aria calda a circa 70 ° , 80 ° C. È molto importante asciugare completamente anche il retro dello stampo in modo da rimuovere ogni traccia di umidità che può causare muffe durante lo stoccaggio. I singoli alveoli possono essere asciugati, delicatamente, con un batuffolo di cotone in modo da aumentare la lucentezza del prodotto finale.

Step 4: Stampaggio.

Il nostro consiglio finale è quello, dopo avere riscaldato la superficie di colaggio degli stampi con un phon, di effettuare uno stampaggio preliminare, in modo da preparare gli stampi per la produzione.

In questo modo gli stampi saranno ricoperti da un invisibile strato di burro di cacao che facilita l'estrazione del prodotto finale e ne aumenta la brillantezza.

Step 1: Washing

We recommend that your washing system is regularly under maintenance because any loose particles of any kind can, under high pressure, damage the polycarbonate during the cleaning process. Should you use a household dishwasher to clean your moulds, be careful not to add too much dishwasher detergent. Chocolate only leaves greasy but not very resistant stains. Caustic detergents with a base reaction in water, should not be used. Perfect results can be obtained by using warm water and a slightly acidic or alkaline detergent as the one we offer (article M1569 Puliform) and to increase the sparking (article M1570 Brillform). Temperature should remain around +/- 60°C at all times; too high temperatures may result in hydrolytic deterioration, yet again causing the durability of the mould to decrease.

Step 2: Rinsing

When the cleaning process is done, the moulds should be rinsed to remove any remaining detergent. If this is not done properly, a chemical reaction may occur during moulding due to residue residing on the surface of the mould. Demineralised water should be used to rinse the polycarbonate at a temperature of +/- 60°C.

Step 3: Drying

The moulds should then be dried using a hot, air compressor at around 70°, 80°C. It is important to completely dry the back side of the mould, since this might otherwise cause humidity that may transfer on other moulds during storage. This may yet again leave marks upon your product. Single cavities may be dried with cotton swabs, this operation needs to be done gently in order to avoid scratches.

Step 4: Moulding

Our final advice would be, after the cleaning process, gently pre-heat the moulds with hot air drawer and proceed with a preliminary moulding, to prepare the moulds again for production. This should restore some of the shine on your product.
